

Contract Redline War Room

Four specialized AI agents collaborate through Band to redline a contract, quantify exposure, and assemble a human-gated approval packet — sealed in a tamper-evident audit trail.

Track 3 — Regulated & High-Stakes Workflows

Built with  ·  · 

Muhammad Yaseen

The Problem

- › Every inbound contract (vendor MSAs, NDAs, SOWs, DPAs) is routed through Legal, Risk, Finance and Compliance.
- › Today that means email threads, tracked-changes docs and meetings — taking days, with no clean audit trail.
- › Costly misses slip through: uncapped liability, auto-renewal traps, non-compliant data-processing clauses.
- › When something goes wrong, there's no defensible record of who decided what, and why.

The Solution: A War Room

The Coordinator opens a Band room, discovers + recruits 4 specialist agents.

● **Coordinator** opens Band room · lookup_peers · add_participant

● **Legal** redlines clauses, cites the exact source text

● **Risk** scores severity + dollar exposure

● **Finance** computes worst-case financial exposure

● **Compliance** policy check — can VETO and force a re-plan loop

↓ aggregated exposure score + redline packet

● **HUMAN GATE** Approve / Reject / Request-Changes — only a human decides

Why Band Is Core

Every handoff, finding, state change and discovery is a real Band primitive:

band_create_chatroom

Coordinator opens the review room

band_lookup_peers

discovers Legal / Risk / Finance / Compliance

band_add_participant

recruits each specialist into the room

band_send_message (@mention)

every agent → agent handoff

band_send_event

findings, veto, exposure packet, state

Remove Band from this system → it stops working.

What Makes This Different

- › Cited findings — every redline and risk score quotes the exact contract clause.
- › Compliance can VETO — forcing a visible Coordinator re-plan loop, not a fixed pipeline.
- › Human holds the only key — Approve / Reject / Request-Changes; no agent signs off alone.
- › Tamper-evident audit — SHA-256 hash chain, independently verifiable via GET /api/verify/{id}.
- › Both partners exercised live — AI/ML API (reasoning) + Featherless (compliance inference), tallied at /api/health.
